Senior Product Designer

PROFESSIONAL SUMMARY

UX researcher with 5+ years leading mixed-methods research for mission-critical operator systems across the Department of Defense (DoD), North Atlantic Treaty Organization (NATO), Transportation Security Administration (TSA), and Centers for Disease Control (CDC). Ran end-to-end research on greenfield programs that mapped previously undocumented operator roles and workflows and shaped core system architecture. Skilled at generative and evaluative research in high-constraint, high-stakes environments where access to end users is limited and findings carry operational risk. Active Secret clearance.

CORE EXPERTISE

User Research | Generative & Evaluative Research | Research Planning & Operations

Stakeholder Interviews | Contextual Inquiry | Usability Testing | Cognitive Walkthroughs

Journey Mapping | Information Architecture | Survey Design | Research Synthesis

Accessibility Research (WCAG/Section 508) | Insight Communication | Design Documentation

TOOLS

Figma | Adobe Creative Suite | Claude (Anthropic API) | Open AI API

Model Context Protocol (MCP) | Miro | Jira | Git/GitLab | HTML / CSS | React

EXPERIENCE

LEIDOS

User Experience Design Engineer

Aug 2021 – July 2026 | Huntsville, AL (Remote)

Led research across 10+ mission-critical programs for the DoD, NATO, TSA, and CDC, uncovering operator needs that drove system architecture, interface design, and shipped products across defense, aviation security, and public health.

Key Accomplishments:

- Led end-to-end research on a greenfield defense program that surfaced a previously unmapped range of operator roles and workflows, directly driving the team's adoption of a micro-frontend architecture built around those findings.
- Identified operator error patterns through research on TSA baggage-screening systems, then validated redesign impact via operator feedback, resulting in faster screening and fewer errors for security agents worldwide.
- Conducted field and contextual research into demanding operator environments (ruggedized and sunlight-readable displays, glove operation, enclosed shelters across mobile to wall-mounted form factors), translating constraints into requirements that met customer specs and earned positive operator feedback.
- Ran Section 508 / WCAG 2.1 AA accessibility evaluations using JAWS, Deque axe DevTools, and Acrobat Pro, moving several products from failing to passing compliance.
- Established research-informed patterns and documentation in an enterprise design system adopted by 3+ engineering teams, reducing design-to-dev handoff time and rework.

- Owned research and end-to-end UX for artifact submission, discovery, and AI interaction across an internal database of thousands of artifacts powered by AI search and chat.
- Researched operator decision-making needs to inform an AI-enabled interface for a defense application.

LANDVOICE UX/UI Intern

May 2021 - August 2021 | Orem, UT (Remote)

Partnered with product and engineering teams to deliver user-centered solutions ahead of development schedule.

Key Accomplishments:

- Researched and redefined onboarding processes and design standards to create cohesive, scalable systems across products.
- Contributed research-driven interaction improvements that increased engagement and customer success rates.

SOUTHWEST MARKET Lead Web Designer & Site Manager

May 2020 - April 2021 | East Lansing, MI

Led design strategy and implementation using Shopify CMS for the flagship e-commerce marketplace.

Key Accomplishments:

- Conducted in-depth user research including cognitive walkthroughs and KPI analysis, enhancing site navigation and user satisfaction.
- Generated \$2K in revenue in 3 months as lead designer and site manager for the e-commerce marketplace.

VALEO Comfort & Driving Assistance Co-op

May 2017 - August 2017 | Troy, MI

Prototyped and tested autonomous parking aid/braking for 2020-2023 vehicles with the smart mobility team.

Key Accomplishments:

- Presented human-centered research insights on parking aid development to management, resulting in an unambiguous collision detection system for the end user.

EDUCATION & CERTIFICATIONS

Bachelor of Arts in Experience Architecture, Michigan State University, East Lansing, MI

SAFe Scaled Agile Certification, May 2023
