Senior Product Designer

PROFESSIONAL SUMMARY

Product designer and researcher with 5+ years of experience designing mission-critical operator interfaces for the Department of Defense (DoD), North Atlantic Treaty Organization (NATO), Transportation Security Administration (TSA), and Centers for Disease Control (CDC). Sole designer on the majority of 10+ programs spanning operator dashboards, data visualization, decision-support, and real-time monitoring. Led end-to-end research that shaped core system architecture and built an enterprise design system adopted across engineering teams. Active Secret clearance.

CORE EXPERTISE

User Research | Interaction Design | Information Architecture | Enterprise UX | Prototyping
Complex Workflow Design | Wireframing | Design Systems | Multi-Form-Factor Design
Accessibility (WCAG/Section 508) | User Research Planning | Stakeholder Interviews
Journey Mapping | Wireframing & Prototyping | Design Documentation | Usability Testing

TOOLS

Figma | Adobe Creative Suite | Claude (Anthropic API) | Open AI API
Model Context Protocol (MCP) | Miro | Jira | Git/GitLab | HTML / CSS | React

EXPERIENCE

LEIDOS

User Experience Design Engineer

Aug 2021 – July 2026 | Huntsville, AL (Remote)

Served as the lead (and often sole) product designer across 10+ mission-critical programs for the DoD, NATO, TSA, and CDC, translating complex operator needs into interfaces that shipped across defense, aviation security, and public health.

Key Accomplishments:

- Drove the team's adoption of a micro-frontend architecture that the entire system was built around by leading end-to-end research on a greenfield defense program that surfaced a previously unmapped range of operator roles and workflows.
- Sped screening and reduced operator errors, as validated by operator feedback, by redesigning the operator interface on TSA baggage-screening systems used by security agents worldwide.
- Reduced design-to-dev handoff time and rework tickets by building an enterprise design system from the ground up, adopted by 3+ engineer teams, including component libraries, interaction patterns, design tokens, and governance.
- Met customer specifications and earned positive operator feedback by delivering interfaces for demanding operator environments including ruggedized and sunlight-readable displays, glove operation, and enclosed shelters across form factors from mobile to wall-mounted monitors.
- Moved several products from failing to passing compliance by conducting Section 508 / WCAG 2.1 AA accessibility audits using JAWS, Deque axe DevTools, and Acrobat Pro.

- Reduced implementation ambiguity and improved build quality by partnering with engineers in Figma Dev Mode MCP to deliver production-ready specs.
- Owned the end-to-end UX for artifact submission, discovery, and AI interaction as the designer of an internal database of thousands of artifacts powered by AI search and chat.
- Improved operator decision-making by designing an AI-enabled interface for a defense application.

LANDVOICE UX/UI Intern

May 2021 - August 2021 | Orem, UT (Remote)

Partnered with product and engineering teams to deliver user-centered solutions ahead of development schedule.

Key Accomplishments:

- Developed onboarding processes and redefined design standards to create cohesive, scalable design systems across products.
- Increased engagement and improved customer success rates by contributing to interaction design improvements.

SOUTHWEST MARKET Lead Web Designer & Site Manager

May 2020 - April 2021 | East Lansing, MI

Led design strategy and implementation using Shopify CMS for the flagship e-commerce marketplace.

Key Accomplishments:

- Enhanced site navigation and user satisfaction by conducting in-depth user research including cognitive walkthroughs and KPI analysis.
- Generated \$2K in revenue in 3 months as the lead designer and site manager for the e-commerce marketplace.

VALEO Comfort & Driving Assistance Co-op

May 2017 - August 2017 | Troy, MI

Prototyped and tested autonomous parking aid/braking for 2020-2023 vehicles with the smart mobility team.

Key Accomplishments:

- Presented human-centered design insights to management regarding parking aid development, resulting in an unambiguous collision detection system for the end-user.

EDUCATION & CERTIFICATIONS

Bachelor of Arts in Experience Architecture, Michigan State University, East Lansing, MI

SAFe Scaled Agile Certification, May 2023
